Regional Sales & Delivery Performance Report

Amazon Retail Partners | 100 orders across 5 regions, 2023 | Prepared by Aditya Tale, Business Analyst

Executive Summary

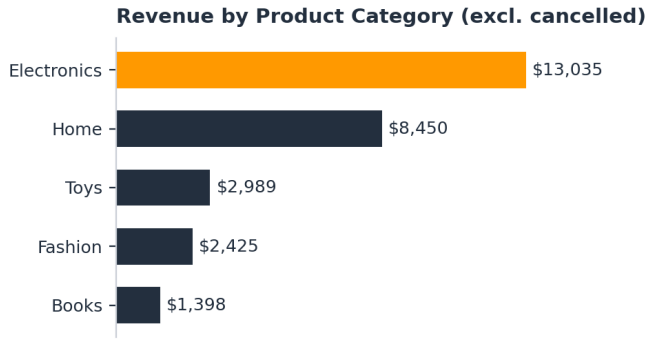

We analysed 100 orders worth **$35,258** in gross sales. After **$6,961** (19.7%) was lost to cancellations, **$28,297** remains active, but only **$13,656** of it has actually been delivered. Electronics drives 46% of active revenue, and North, West and South lead the regions. The main risks are operational, not demand: **30% of orders were cancelled**, only **32.4%** of delivered orders arrived within 2 days, and 21 old orders still show "In Transit". Fixing delivery speed and the stuck backlog is the fastest way to protect revenue.

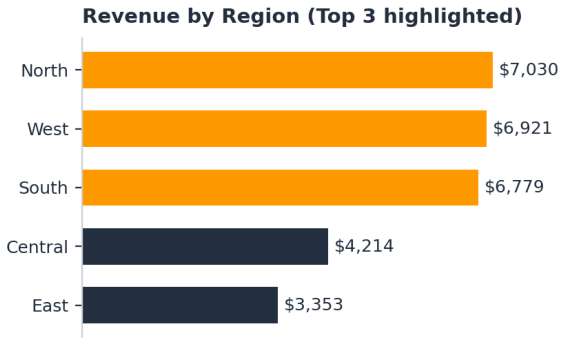

$28,297	$13,656	30%	32.4%	3.8 days
Total Revenue (excl. cancelled)	Delivered Revenue (effective sales)	Cancellation Rate (30 of 100 orders)	Fast Deliveries (2 days or less)	Avg Delivery Time (34 delivered)

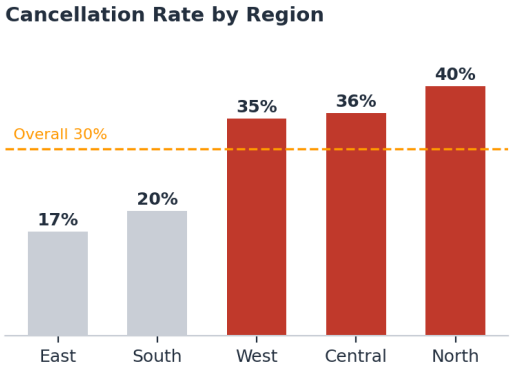

Key Insights

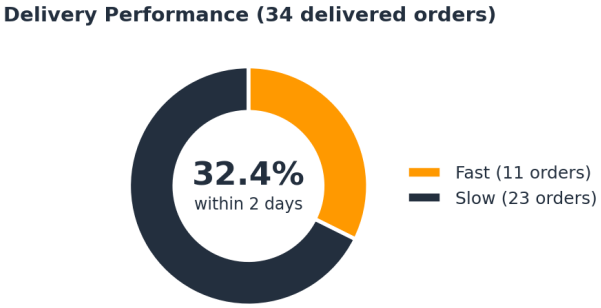

1. **Half the "revenue" is not yet delivered.** Of $28,297 active revenue, $14,641 (52%) is still in transit and only $13,656 is delivered. The 21 in-transit orders placed before October 2023 are worth $10,797, yet no delivered order took longer than 7 days. These look stuck or un-updated.
2. **Electronics and one product dominate revenue.** Electronics earns $13,035 (46% of active revenue), ahead of Home at $8,450. Smartphone alone brings $9,644 from just 4 orders, while Cookware Set Pro leads on volume with 24 units.
3. **The top regions are also the leakiest.** North ($7,030), West ($6,921) and South ($6,779) lead on revenue, but North cancels 40% of orders and West 35%. North lost $3,461 (33% of its gross sales) to cancellations. South (20%) and East (17%) retain far more of their sales.
4. **Delivery is slow and uneven.** Only 11 of 34 delivered orders (32.4%) arrived within 2 days; 8 took 6-7 days. Amazon Logistics, the largest carrier with 29 orders, delivered just 2 of 10 fast. FedEx averages 4.4 days versus 3.0 for DHL.
5. **Cancellations cluster in specific segments.** Fashion has the highest category rate (37%), Apple Pay orders cancel at 45% (credit card: 19%), and Prime customers cancel 43% versus 18% for Individual customers. Cancellations happen about 3.7 days after ordering, which is close to the average delivery time.

Visual Evidence: Dashboard Charts

Charts rebuilt from the workbook pivots: category revenue, top regions, cancellation rate and delivery performance. Revenue excludes cancelled orders.

Source: Amazon sales workbook (AmazonSales, CustomerMaster, ProductMaster sheets). 100 orders, Jan-Dec 2023.

Visual Evidence: Pivot Summaries

Active revenue by Region and Product Category (Sum of Total Amount, cancelled orders filtered out)

Region	Electronics	Home	Toys	Fashion	Books	Total
North	$5,282	$719	$334	$231	$464	**$7,030**
West	$1,352	$3,842	$897	$480	$350	**$6,921**
South	$3,689	$1,881	$43	$1,005	$161	**$6,779**
Central	$2,347	$1,378	$291	$114	$84	**$4,214**
East	$365	$630	$1,424	$595	$339	**$3,353**
Total	**$13,035**	**$8,450**	**$2,989**	**$2,425**	**$1,398**	**$28,297**

Region performance (orders, sales and cancellations)

Region	Orders	Gross sales	Active revenue	Cancelled	Cancel rate
North	25	$10,491	$7,030	10	**40.0%**
West	23	$8,359	$6,921	8	34.8%
South	20	$7,317	$6,779	4	20.0%
Central	14	$5,456	$4,214	5	35.7%
East	18	$3,635	$3,353	3	16.7%
Total	**100**	**$35,258**	**$28,297**	**30**	**30.0%**

Carrier delivery speed (delivered orders only; 5-10 orders per carrier, so treat differences as directional)

Carrier	Orders	Delivered	Avg days	Fast / Slow
Amazon Logistics	29	10	3.8	2 / 8
DHL	21	6	3.0	3 / 3
UPS	21	7	3.7	3 / 4
FedEx	15	5	4.4	1 / 4
USPS	14	6	4.0	2 / 4
Total	**100**	**34**	**3.8**	**11 / 23**

Business Questions

Question	Answer
Most successful product category (revenue)	**Electronics**: $13,035, or 46% of active revenue ($15,209 gross). Home is second at $8,450.
Region with highest cancellation rate	**North**: 40% (10 of 25 orders), followed by Central (35.7%) and West (34.8%).
Orders delivered within 2 days	**11 orders** (32.4% of 34 delivered). The other 23 (67.6%) were "Slow".
How XLOOKUP supported the analysis	XLOOKUP linked Product ID and Customer ID to the Product Master and Customer Master sheets, adding product name, category and customer type to each order. This made category revenue and customer-segment cancellation analysis possible without manual matching.
Recommendations to improve delivery	Clear the stuck in-transit backlog, set a 7-day escalation rule, shift volume toward faster carriers and add proactive delivery updates (see below).

Recommendations

1. **Recover revenue stuck in transit.** Audit the 21 orders placed before October 2023 ($10,797) and confirm whether each was delivered, lost or never updated. Auto-escalate any order not delivered within 7 days, the longest delivery time seen. Every 10 cancellations avoided is worth about $2,300 at the average cancelled order value of $232.

2. **Cut cancellations where they are highest.** Focus first on North, West and Central, on Prime customers and on Apple Pay checkouts. Review payment failures and send delivery-date updates in the first 3 days, since that is when most cancellations occur. Target a drop from 30% to 20% overall.

3. **Speed up delivery with carrier rebalancing.** Move volume toward DHL and UPS (3.0 and 3.7 days), set a 2-day service target for high-value Electronics, and agree improvement plans with FedEx (4.4 days) and Amazon Logistics (80% slow). Aim to lift fast deliveries from 32% to 50% within a quarter.
